NCR RealPOS™ 5966 Value Touch

Maximizes Store Productivity

- Reliable Touch Display
- Retail Functionality
- Plug and Play Design

Value Touch Designed for Retail

With the ever changing demands of retail, NCR's RealPOS 5966 value touch display is designed and developed to provide a cost-effective touch solution for retailers who want to maximize store productivity and extend the life span of the touch display.

Unlike standard "off the shelf" touch-screen displays, the NCR RealPOS 5966 value touch display includes integrated stereo speakers and an optional three track magnetic stripe reader, two important requirements in retail environments.

By using five-wire resistive touch technology, the screen offers resistance to common retail contaminants, such as dirt grease, water, coffee, vinegar, cleaning detergents and gasoline. Additionally, the NCR RealPOS 5966 performance touch display utilizes VGA for video connections and USB for touch communications.

With quality and reliability in mind, the NCR RealPOS value touch display undergoes environmental and compatibility testing and is manufactured under NCR standards to provide you with confidence that the NCR RealPOS 5966 can deliver POS performance.

Ready to Use Right Out of the Box

Designed to seamlessly integrate within your current point-of-service workstations, the NCR RealPOS 5966 value touch is an all-in-one touch display. The package includes a tabletop mount, as well as the USB touch interface, VGA video connection cables, and US power cord for more user-friendly ordering and installation.

In addition, the NCR RealPOS 5966 supports industry standard OPOS and JavaPOS drivers, standard retail industry applications and operating systems.
